## Subscription Strategy

Setting up the difference between source and copied trades

Volume scaling \*

Multiply

**Autoscale** - The ratio of a copy's volume to the original volume is equal to the ratio of the follower's and provider's *Compared values*. The result is then multiplied by the *Ratio multiplier*.

**Multiply** - A copy's volume is equal to the provider's original volume multiplied by the *Volume multiplier*.

**Fixed** - Copies' volumes are always equal to the specified *Copies' volumes*.

**Lots proportion** - A copy's volume is calculated as the whole number of *Lots steps* in the follower's *Compared value*, multiplied by *Volume per step*.

Volume multiplier \*

1

Number to multiply the provider's volume by for a copy
